Automation of Invoice Reporting with UiPath

Raisa Vigo Fonseca

AI Automation | Project 6

Problem

The company needs an automated workflow to replace manual invoice reviews and produce a clear report of invoices due by 22 September 2025. The system should:

- Read invoices from Google Drive
- Extract key fields
- Generate short purchase descriptions
- Populate a Google Sheet
- Flag low-confidence totals for review

Solution

This solution automates reading invoices, checking confidence, generating descriptions, and writing results to Google Sheets.

- Read invoices from Google Drive using Document Understanding
- Extract key fields and validate confidence
- Generate short purchase descriptions with GenAI
- Filter invoices due on/before 22 Sept 2025
- Write structured rows into Google Sheets

Benefits

Reduces manual data entry, saving significant time and allowing finance teams to focus on higher-value tasks

Improves accuracy by automating extraction and flagging low-confidence fields for timely human review

Provides instant purchase context with AI-generated descriptions, and supporting faster financial decisions

Challenges & improvements

What worked well and what you'd improve if you had more time or tools

What worked well:
Reading the invoices and generating the purchase descriptions worked smoothly. The extraction steps were straightforward, and the AI descriptions came out consistently accurate and helpful.

Challenges & improvements

What worked well and what you'd improve if you had more time or tools

What I'd improve:
Filtering by due date and writing the results into the spreadsheet were the most challenging parts. With more time or better tools, I would refine the date-handling logic, add clearer validation steps, and build a more robust error-handling flow. I eventually solved the issue using a resource from the TripleTen Hub, but I would streamline that part to make the workflow more intuitive and maintainable.
